

Falling Short: Most States Lag on Dental Sealants

2012 GRADE

Montana

Dental sealants are clear plastic coatings that take only a few minutes to apply to the chewing surfaces of permanent molars, the most cavity-prone teeth. Research shows that school-based sealant programs reduce tooth decay by 60 percent at one-third the cost of a filling.

F

How well is **Montana** protecting kids from tooth decay?

| Sealant Benchmarks | State | Goal |
|---|---------------------------------|--|
| % of high-need schools with sealant programs | None | 75%+ |
| Unnecessary rules restricting hygienists from applying sealants in schools* | Severe restrictions | No restrictions |
| Participation in National Oral Health Surveillance System | Yes – but no recent data | Yes – and submitted recent data |
| Meeting Healthy People 2010 sealant goal | No | Yes |

MONTANA
earned 2 out of a
possible 11 points.

Grading:
A = 10-11
B = 8-9
C = 6-7
D = 3-5
F = 0-2

For a detailed description of the grading system, see the Methodology section of the report at www.pewstates.org/dental-sealants-methodology.

THE
PEW
CENTER ON THE STATES

* Pew surveyed states to learn whether regulations require dentists to examine children before hygienists can apply sealants at schools – restrictions that research shows are unnecessary. State policies were categorized as follows: A dentist's exam is not required – no restrictions; a dentist's exam is sometimes required (e.g., certain classifications of dental hygienists can apply sealants without a dentist's prior exam) – some restrictions; a dentist's exam is always required – severe restrictions; and a dentist's exam is always required and the dentist must remain on-site while the hygienist applies the sealant – most severe restrictions.
