Falling Short: Most States Lag on Dental Sealants

Minnesota

Dental sealants are clear plastic coatings that take only a few minutes to apply to the chewing surfaces of permanent molars, the most cavity-prone teeth. Research shows that school-based sealant programs reduce tooth decay by 60 percent at one-third the cost of a filling.

How well is Minnesota protecting kids from tooth decay?

Sealant Benchmarks	State		Goal
% of high-need schools with sealant programs	25-49%		75%+
Unnecessary rules restricting hygienists from applying sealants in schools*	Some restr	rictions	No restrictions
Participation in National Oral Health Surveillance System	Yes – and s recent data		Yes – and submitted recent data
Meeting Healthy People 2010 sealant goal	Yes		Yes
MINNESOTA earned 8 out of a possible 11 points.		or a detailed description the grading system, ee the Methodology ection of the report at ww.pewstates.org/den ealants-methodology.	To see all states' grades, see

* Pew surveyed states to learn whether regulations require dentists to examine children before hygienists can apply sealants at schools – restrictions that research shows are unnecessary. State policies were categorized as follows: A dentist's exam is not required – no restrictions; a dentist's exam is sometimes required (e.g., certain classifications of dental hygienists can apply sealants without a dentist's prior exam) – some restrictions; a dentist's exam is always required – severe restrictions; and a dentist's exam is always required and the dentist must remain on-site while the hygienist applies the sealant – most severe restrictions.
