

Achieving **Equity** Through HIA

Jonathan Heller
Director & Co-founder

National HIA Meeting • Washington, DC • April 4th, 2012

Housing

USC Expansion – gentrification and displacement

Rental Assistance Demonstration – public housing

Pittsburg BART Extension – affordable housing in TOD

Transportation

I-710 Expansion – goods movement

Land Use

NMRT Waste Facility – environmental justice

Labor policies

Paid Sick Days legislation – worker rights

Gender Pay Equity legislation – wages

School to Prison Pipeline

School Funding – distribution of resources

School Discipline – school push out

Alternatives to Incarceration – criminalization

After selecting a topic, need data about disproportionate impacts

This involves:

Scoping: asking the right questions

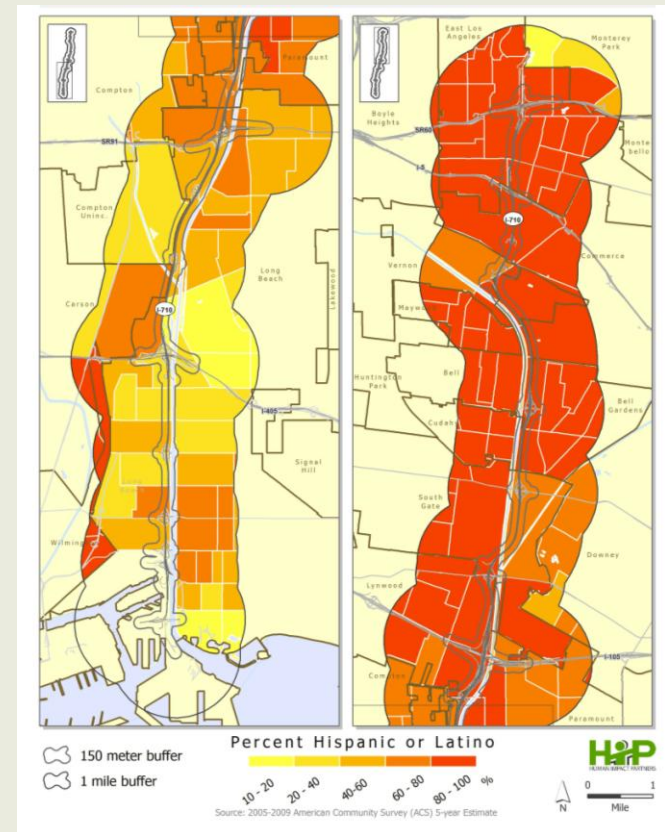

Assessment: acquiring relevant data and doing appropriate analyses

Recommendations: proposing mitigations that account for disproportionate impacts

Challenges:

Appropriate data is not always available

Targeted mitigations can be difficult to develop

Data without power is unlikely achieve equity

Without a commitment to equity and democracy on the part of those controlling the HIA process,

and without power in the hands of those who support these values,

HIA can become another technocratic tool that supports those in power who are interested in maintaining the status quo.

No one person or organization (including an HIA practitioner) is truly objective

A diverse stakeholder group representing many interests may be the closest thing to objectivity

Diverse stakeholder groups still must have a
commitment to equity

A commitment to equity is often called “bias”

How do we do this?

Engaging, organizing, and empowering impacted populations

Analyzing power distribution and being strategic

Strategic communication

Public health leadership

USC Specific Plan HIA:

HIP, SAJE & Esperanza Community Housing Corporation

Brought together a panel of 15 impacted residents

Deliberated and came to consensus about impacts and recommendations; informed by “subject matter experts”

Advocated for recommendations in the community and at hearings

Power Analysis

Builds understanding of how and by whom power is exercised to cause and maintain problems and conditions that others may seek to change

Has been used to inform:

Participation in HIAs (e.g., steering committees)

HOLD FOR RELEASE UNTIL JULY 30 at 1:30 PST

A Health Impact Assessment of the
CALIFORNIA HEALTHY FAMILIES, HEALTHY WORKPLACES ACT
SUMMARY OF FINDINGS · July 30, 2008

The health of all Californians would significantly benefit if workers earned paid sick days and used them when ill or when a family member needs care. However, almost 40% of the California workforce—5.4 million workers—do not have the right to take paid time off from work when they are sick.

The California Healthy Families, Healthy Workplaces Act of 2008 (AB 2716) would guarantee that all workers in the state accrue at least one hour of paid sick time for every 30 hours worked. In the spring of 2008, Human Impact Partners and researchers at the San Francisco Department of Public Health conducted a Health Impact Assessment of the bill, evaluating how it could protect and improve public health. This report provides a summary of the findings of that assessment.

The best available public health evidence demonstrates that the California Healthy Families, Healthy Workplaces Act of 2008 would have significant positive public health impacts. Guaranteed paid sick days would help reduce the spread of flu; protect the public from diseases carried by sick workers in restaurants and in long-term care facilities; prevent hunger and homelessness among sick low-income workers; and enable workers to stay home when they are sick or when they need to care for a sick dependent. We would all be better off if this commonsense workplace practice were to become law.

Figures 1 and 2 show examples of potential negative health outcomes associated with a worker without paid sick days becoming ill and either choosing to go to work or take time off. In both scenarios, there are potential negative health outcomes for the worker, coworkers, and customers, including additional people becoming sick, longer recovery times, hospitalization, need for additional medical care, and the health effects associated with lost wages and unemployment.

For the full report and references see www.humanimpact.org/PSD.

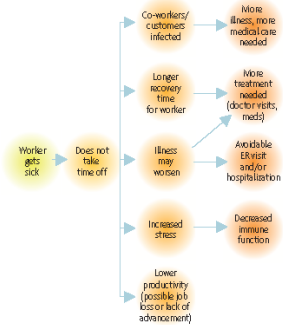

Figure 1. Taking no time off when sick: examples of potential negative health outcomes.

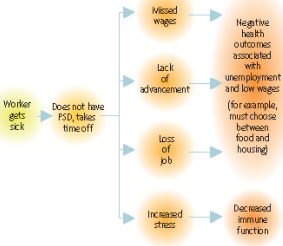

Figure 2. Taking time off when sick, without paid sick days: examples of potential negative health outcomes.

NMRT Dirty Material Recycling Facility HIA

Bernalillo County NM Place Matters: environmental and public health agencies, community residents

Proposed facility in EJ community already impacted by superfund sites, industry and traffic;

Environmental health agency led the HIA process:

Effectively engaged community through PM

Focused on topic and issues of concern to community

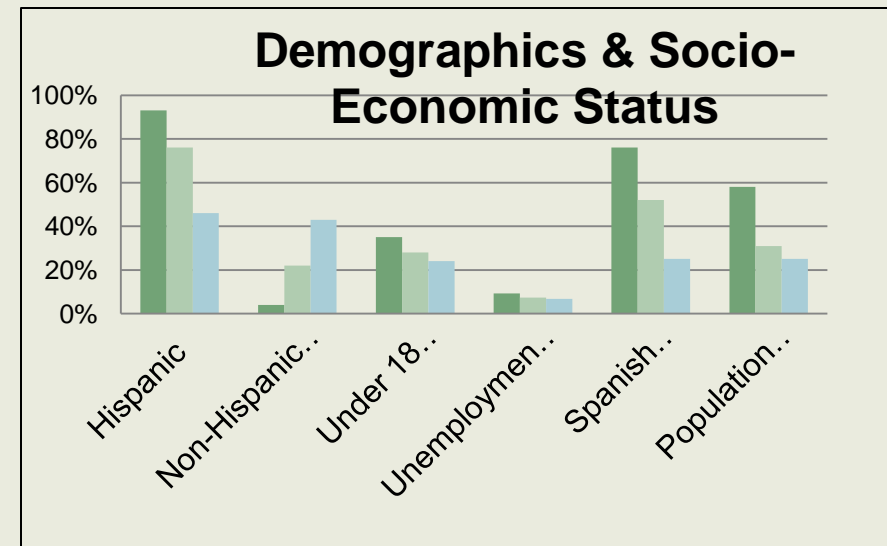

Collected data

Drafted report

Released report and weighed in at hearings, *despite pressure*

Built new alliances (i.e., power)

Permit denied

Failure to discuss equity explicitly in HIA

Lack of clarity of meaning of equity

Difficult to keep focus on equity

HIA seen as technocratic tool; discussion of equity and engaging community seen as compromising objectivity

Opportunities

In Screening, explicitly discuss definition and importance of equity in HIA with participants

Ensure Scope, Assessment, and Recommendations include equity

In report, explicitly state equity impacts

Technical difficulty in assessing equity

Existing conditions data is not always available
stratified appropriately or at the necessary scale

Few impact prediction tools available to assess
impacts on equity

Opportunities

Though not perfect, use data that exists to discuss
equity

Methods development

Lack of power to effect change if you only have data

Difficult to engage and empower impacted community

Community organizations have limited capacity

Discomfort discussing power

Strategic communication is difficult

Lack of public health leadership

Opportunities

Use the HIA process to build power and leadership

Ensure community partners have necessary resources to participate

Topic selection

Data analysis

Building power

Commitment to equity
