

# Medicaid Programs That Improve The Safety of Opioid Use

## Spotlight on Wyoming

To minimize overdoses and other harm associated with the misuse of prescription drugs, public and private insurance plans use patient review and restriction (PRR) programs to encourage the safe use of opioids and other controlled substances. Through PRRs, insurers assign patients who are at risk for substance use disorder (SUD) to predesignated pharmacies and prescribers to obtain these drugs. This fact sheet presents key features of Wyoming's Medicaid fee-for-service (FFS) PRR program that were acquired from a 2015 survey and literature review by The Pew Charitable Trusts. The nationwide survey of Medicaid PRR programs captured information on program characteristics, structures, and trends. Of the 41 states that responded (plus the District of Columbia and Puerto Rico), 38 operate an FFS PRR. For more information on state responses, visit [www.pewtrusts.org/PRRreport](http://www.pewtrusts.org/PRRreport).

### PRR program initiation

PRR programs have been in operation in Medicaid FFS programs in the United States since the early 1970s. Wyoming's PRR program was launched in 2003.

### Designated provider structure for PRRs

PRRs require patients to receive controlled substance prescriptions and related care from designated pharmacies, prescribers, hospitals, and/or other providers, such as dentists or pain management specialists. Patients enrolled in Wyoming's PRR are assigned to a designated pharmacy. The chart below compares Wyoming's PRR program design with that of other programs.

	Assign patients to a pharmacy only	Assign patients to both a pharmacy and prescriber	Assign patients to a pharmacy, prescriber, and hospital
<b>Number of responding programs (%) n = 38</b>	13 (34%)	17 (45%)	8 (21%)

## Criteria used to identify at-risk patients for PRR enrollment\*

Programs use specific, predetermined criteria to identify potentially at-risk beneficiaries for enrollment in a PRR. Wyoming's specific criteria are checked below:

	<b>Filling a certain number of controlled substance prescriptions</b>
	<b>Filling a certain number of other prescriptions</b>
✓	<b>Utilizing a certain number of pharmacies to obtain controlled substances</b> Any recipient who receives controlled substance prescriptions from two or more prescribers and utilizes two or more pharmacies within a designated period.
✓	<b>Visiting a certain number of prescribers to obtain controlled substances</b> See the section above on number of pharmacies for additional details.
	<b>Visiting a certain number of emergency rooms</b>
	<b>Obtaining a certain number of controlled substances in the same therapeutic class</b>
✓	<b>Referral/recommendation</b>
	<b>Other</b>

\* With the exception of referrals/recommendations, these criteria are based on use over a specified time period. These time periods may vary between criteria and are specified where known. When publicly available, specific numbers triggering potential identification as at-risk are provided for the listed criteria.

## Patients automatically excluded from PRR enrollment

Some beneficiaries with pain that is difficult to manage are typically excluded from PRRs. Based on survey results from the District of Columbia and the 37 states with an FFS PRR, the most common reasons for automatic exclusion were that patients are:

- Receiving treatment for certain types of cancer (15 states).
- In long-term care (14 states).
- In hospice care (13 states).
- In skilled nursing facilities (10 states).

71%

Twenty-seven of the 37 states and DC automatically exclude at least one patient population from PRR enrollment to help ensure that these patients have access to effective pain management. Of these, 63% exclude more than one patient population.

29%

Eleven responding states do not automatically exclude patients, although they may choose to do so after performing a clinical review.

Wyoming automatically excludes patients who are receiving cancer treatment from PRR enrollment.

## Process for patient notification of PRR enrollment

Sixteen programs (over 46 percent of those responding<sup>\*</sup>), including Wyoming's PRR, provide beneficiaries with less than 30 days' notice before PRR enrollment. Specifically, Wyoming provides 10 days' notice. Fourteen states (40 percent) provide 30 days' notice, and five states (14 percent) provide beneficiaries with more than 30 days' notice before PRR enrollment.

## Process for patient appeal of PRR enrollment

Wyoming and 31 other states (over 86 percent of responding states<sup>†</sup>) provide beneficiaries with 30 or more days from notification to appeal the decision to enroll them in the FFS PRR program. Specifically, Wyoming allows beneficiaries 30 days to appeal upon receiving notification of PRR enrollment. Five programs (almost 14 percent) provide beneficiaries with less than 30 days to appeal the decision.

If a Wyoming beneficiary chooses to appeal, he or she is enrolled in the PRR program during the appeals process. Fifteen percent of states follow this practice.

\* These data represent 34 states and DC. This includes states with FFS PRR programs that either confirmed this information or make it publicly available.

† These data represent 36 states and DC. This includes states with FFS PRR programs that either confirmed this information or make it publicly available.

## Selection of designated providers

Thirty-six programs (95 percent of responding programs), including Wyoming's PRR, allow for beneficiary input when selecting providers. Specifically, Wyoming chooses beneficiaries' most frequently visited pharmacies with the option for beneficiaries to change selections.

## Drugs managed through the PRR

Forty-seven percent of FFS PRR programs, including Wyoming's PRR, require patients to receive controlled substances in Drug Enforcement Administration Schedules II-V from designated providers. Alternatively, 45 percent of programs require patients to receive controlled as well as noncontrolled substances identified as frequently subject to misuse or diversion, such as those used to treat HIV, from designated providers. Eight percent of programs require patients to receive only a subset of controlled substance schedules from designated providers.

## Additional services offered to PRR enrollees

Forty-seven percent of responding states, including Wyoming's PRR, offer additional services to PRR enrollees, such as general information on SUD, referrals for SUD treatment, referrals to pain specialists, and case management services. Specifically, Wyoming offers case management services.

## PRR access to state prescription drug monitoring programs

Prescription drug monitoring programs (PDMPs) are state-run electronic databases that monitor dispensed prescriptions for controlled substances in 49 states and the District of Columbia. Wyoming's Medicaid staff has access to the PDMP and uses it to monitor cash transactions. The chart below compares the Wyoming FFS Medicaid program's access to the PDMP with that of other programs.

	No access to the PDMP	Access to the PDMP
<b>Number of responding programs (%) n = 38</b>	22 (58%)	16 (42%)

## Resulting health outcomes in Medicaid

Wyoming reported a 39 percent decrease in total emergency room visits, and a 75 percent decrease in total number of providers visited, for patients enrolled in its FFS PRR program in fiscal year 2014 (n = 31). Further, its FFS PRR saw a 19 percent decrease in the total amount paid for prescription drug costs (Wyoming includes both controlled and noncontrolled substances identified as frequently subject to misuse), and a 17 percent decrease in the total amount paid for medical services. Measures were evaluated for each patient six months before and six months after PRR enrollment.
