

METHODOLOGY

New Bridge Strategy and FM3 Research surveyed 700 registered voters throughout the United States on behalf of The Pew Charitable Trusts. They conducted live computer-assisted telephone interviews in English and Spanish from June 20-24, 2019. All respondents interviewed were asked whether they would prefer to take the survey in English or Spanish. Fifty-two percent of interviews were completed on cellphones and 48 percent on landlines. The margin of error is plus or minus 3.7 percentage points at the 95 percent level of confidence. The sampling error is dependent on sample size, so the margin of error is higher for subgroups. The margin of error has not been adjusted for design effects.

The sample for this survey was drawn from registered voter files provided by a private list vendor who specializes in providing Registration Based Sample. The records are multi-sourced from state voter files and updated at least monthly. Registered voter records were selected randomly from the file for inclusion in the study. Interviewers asked for the voter on file. If that individual was not available, interviewers were allowed to ask for another adult in the household who is registered to vote at that address (on landline) or in that state (on cellphone). In all cases, interviewers confirmed that the respondent was registered to vote in order to participate. Each number in the sample was called four times before being retired.

Quotas were applied for gender, age, ethnicity, and education based on universe counts from the [U.S. Census Bureau's report, "Voting and Registration in the Election of November 2018,"](#) to help ensure that the sample was representative of registered voters. Region and state quotas were based on the 2010 Census for the voting age population (age 18+ adults).

The survey team weighted the data for age, ethnicity, and education based on the same targets from the 2018 U.S. Census report used to set quotas. When comparing this document with the topline, which shows the verbatim text of all questions asked and breakdowns of responses to every question, figures may vary because of rounding.

The topline includes the interviewer instructions.
