

The Honorable Xavier Becerra  
Secretary  
US Department of Health and Human Services  
Washington, DC 20201

October 3, 2022

Dear Secretary Becerra,

On behalf of the undersigned organizations representing health care providers, public health professionals, scientists, patients, and the pharmaceutical and diagnostics industries, thank you for being the first Secretary of Health and Human Services to attend the World Antimicrobial Resistance (AMR) Congress in September 2022 and for your powerful remarks about the urgent need for action to strengthen the antimicrobial pipeline and ensure optimal antimicrobial use. We strongly agree that we must make the current “moment into a movement” by translating increased attention on AMR into meaningful action to benefit patients. To achieve our common goals, we respectfully request that you call on Congress to advance the PASTEUR Act this year.

The PASTEUR Act continues to gain momentum and currently has over 60 bipartisan cosponsors. We greatly appreciate that the President included a proposal that aligns with PASTEUR in his 2023 budget request, and we were encouraged to see the released Senate Labor-Health and Human Services appropriations bill for 2023 support that proposal. AMR thought leaders broadly agree that PASTEUR would have a transformative effect on the broken antimicrobial pipeline, delivering the novel, life-saving therapeutics that patients desperately need to fight superbugs. PASTEUR would also provide new funding for rural, critical access and safety net hospitals to support antimicrobial stewardship, to ensure that antimicrobials are used appropriately to limit the development of resistance, and to ensure that the vulnerable patients served by these hospitals can have access to the benefits of antimicrobial stewardship. The time for PASTEUR is now.

Despite broad recognition of the need for action on AMR, congressional leaders have not yet sufficiently prioritized this issue. Delays in the passage of PASTEUR are delays in the development of novel antimicrobials to treat highly resistant, life-threatening infections—delays that many patients, including those particularly susceptible to infections, such as patients with cystic fibrosis, cancer, or organ transplants, cannot afford.

Once again, we thank you for your leadership in the fight against AMR and hope you will direct your passion for solutions at a key audience that is well positioned to advance meaningful change—the US Congress. Our diverse group of stakeholders is united behind PASTEUR, and your voice can help us cross the finish line.

Sincerely,

AdvaMedDx
