

States Stalled on Dental Sealants

New Jersey

Dental sealants are clear plastic coatings applied to cavity-prone permanent molars. Research shows that school-based sealant programs reduce tooth decay by 60 percent at one-third the cost of a filling. Although New Jersey passed legislation in 2012 to allow hygienists to place sealants in some settings without a prior exam by a dentist, policies have not yet taken effect. New Jersey's grade in 2014, an F, did not change from 2012.

F
2014
Grade

2012 Grade: **F**

How well is **New Jersey** protecting kids from tooth decay?

Sealant benchmarks	2012	2014	Goal
Percentage of high-need schools with sealant programs	25-49%	25-49%	>75%
Unnecessary rules restricting hygienists from applying sealants in schools?*	Yes—most severe restrictions	Yes—most severe restrictions	No restrictions
Participation in National Oral Health Surveillance System?	No data submitted	No data submitted	Yes—and submitted recent data
Meeting Healthy People 2010 sealant objective?	No	No	Yes

Grading

A	10-11
B	8-9
C	6-7
D	3-5
F	0-2

2 New Jersey earned 2 out of a possible 11 points on sealant policies.

For a detailed description of the grading system, see the methodology section of the report at pewtrusts.org/dentalsealants.

* Pew and the Association of State and Territorial Dental Directors (ASTDD) surveyed states to learn whether regulations require dentists to examine children before hygienists can apply sealants at schools —restrictions that research shows are unnecessary. State policies were categorized as follows: A dentist's exam is not required – no restrictions; a dentist's exam is sometimes required (e.g., certain classifications of dental hygienists can apply sealants without a dentist's prior exam) – some restrictions; a dentist's exam is always required – severe restrictions; and a dentist's exam is always required and the dentist must remain on-site while the hygienist applies the sealant – most severe restrictions.
